

Manufacturing case study

CCTV transforms security of specialist electronics firm

Background

West Yorkshire-based Electroparts is a specialist contract electronics manufacturer, established in 1990. Employing 18 staff at its Skelmanthorpe workshop, this niche organisation provides medium-volume printed circuit assembly, and technical cable and wiring loom manufacture, to name just a few products. Founded on principles of quality advanced engineering, the company has experienced impressive growth, and clients now include local, regional and national OEMs.

Challenge

An alarm system has long protected Electropart's premises and the valuable electronic solutions contained within it. But as the business has developed, so too has the need to invest in a more comprehensive security system that will protect the firm's products as well its most valuable assets – its employees.

So, when the workspace expanded as a result of corporate growth, it was evident that a more comprehensive security system was needed.

Ti Installation's joint managing director Mark Copley explains: "Investments in modern CCTV technology are becoming increasingly commonplace among UK businesses. But some people mistakenly think surveillance cameras can only be used as a crime deterrent or source of much-needed evidence, should an unlawful activity take place. In truth however, they are an extremely important tool to safeguard employees, particularly lone workers, whilst they carry out their job."

Solution

West Yorkshire based Ti Installations was therefore approached for guidance – how could technology better protect employees within the company’s growing workspace?

The Ti team was found to be experienced, professional and highly skilled. The fact that Ti is a local company, offering responsive, flexible and competitive pricing, was also attractive – the two firms seemed to mirror each other in that respect.

The company’s CCTV & Alarms division demonstrated extensive knowledge within this specialist area of commercial security, and an internal CCTV solution was recommended and installed as a result.

Result

In the words of Electroparts’ managing director; ‘a previously limited and restrictive security capability has been transformed into a very positive experience’.

Now employees – especially lone workers – are safeguarded by the surveillance of protective CCTV. The technology has also strengthened Electroparts’ security strategy – something every successful business should strive for.

Modern remote monitoring has provided immediate stress reduction and time savings, and any queries are dealt with quickly by Ti Installations’ support team.

"Ti Installations has proved a very capable and professional service provider, with the ability to make an opaque technology crystal clear. Their delivery is of a very high standard, plus they arrive on time and freely offer their advice at all times. I know that the team will continue to develop their solution and support Electroparts as the business continues to grow."

Carol Swallow, Managing Director, Electroparts

If you would like to speak to someone from [Ti] CCTV & Alarms or the wider [Ti] Installations team about the better protection of your business, please contact our friendly security specialists who would be delighted to provide free, no obligation advice.
